ERRATA

In Special Report No. 31 of the Smithsonian Astrophysical Observatory the orbital data for July and August 1959, listed under Operational Information, are in error and are to be disregarded.

Corrected orbits for these months will appear in a forthcoming Special Report.

CATALOGUE OF SATELLITE OBSERVATIONS FOR
JULY AND AUGUST, 1959

by

Richmond G. Albert ¹

Introduction

Beginning with the current issue, the Smithsonian Astrophysical Observatory will publish the catalogue of satellite observations as a series of reports, each report relating to one or more satellites. The greatly increased volume of observations received by the Observatory necessitates this system.

The present report is the first of the series for July and August, 1959, which will list observations for dates not earlier than January 1, 1959, of all artificial earth satellites except those for which SAO does not have tracking responsibility. Minitrack and Doppler data received by SAO for July and August, 1959, are not included. The observations listed include those from Baker-Nunn camera stations, Moonwatch teams, U.S. and foreign observatories, military installations, Phototrack stations, and miscellaneous observers. Some of the observations have been received from Project Space Track of the Air Force Cambridge Research Center, under an arrangement involving an exchange of all observations of artificial earth satellites.

The catalogue presents three groups of observations, each in chronological order, for each satellite in the following order:

1. Current Observations: A list of observations for July and August, 1959.
2. Addenda: Observations, not previously included in a Special Report, for the period from January 1, 1959, through June 30, 1959.
3. Corrigenda: A list of corrected forms of observations previously published.

No attempt will be made to list addenda and/or corrigenda for satellite observations made earlier than January 1, 1959, except those of Satellite 1958 Zeta, for which we list all addenda and corrigenda received.

Units

The date given lists the month and day of the observation; the time (U. T.) is given in hours, minutes and seconds; right ascension is in hours, minutes and seconds; declination, azimuth and altitude are in degrees, minutes and seconds; azimuth is measured from North through East; the range is in meters.

An explanation of the index code appeared in Special Report No. 23² which includes indices for time precision, position precision, coordinate system and refraction correction, equator and equinox of reference, and type of instrumentation.

A complete up-to-date list of station coordinates will appear in the near future.

¹ Mathematician-Programmer, Optical Satellite Tracking Program.

² Copies of the explanation are available on request from the Smithsonian Astrophysical Observatory.

Operational Information

The following elements and current estimates of the lifetimes of artificial earth satellites were obtained by the SAO personnel listed. Orbital elements for 1958 E are omitted because no definitive orbit was obtained for the period covered by this report.

For 1958 α , 1958 β 1 and 1958 β 2, tables of residuals are given which compare the elements obtained from more precise short-interval orbits with those evaluated from bimonthly orbits.

These elements are based on Baker-Nunn and Meudon Observatory observations from August 4 to August 12. The uncertainty is less than 2 km within this eight-day period.

For July, few observations were received from stations in the Southern hemisphere because of poor visibility. For the same reason, no Baker-Nunn observations were at hand for dates after August 13. Hence, no orbits are given for these periods.

OSCULATING ELEMENTS

by

Dr. Yoshihide Kozai³

The mean semi-major axis a is obtained from the anomalistic mean motion n , by use of the equation:

$$n^2 a^3 = GM \left\{ 1 - \frac{A_2}{p} \left(1 - \frac{3}{2} \sin^2 i \right) \sqrt{1 - e^2} \right\} ,$$

where G is the gravitational constant, M the mass of the earth, $p = a(1 - e^2)$, and A_2 ($= 1.624 \times 10^{-3}$ square equatorial earth radii) is the coefficient of the second harmonic of earth potential. If n is in revolutions per day and a in equatorial earth radii, then $GM = 290.4788$.

To derive osculating from mean elements one must add the following short-periodic perturbations, where r is the geocentric radius vector and v is the true anomaly.

$$\begin{aligned} da &= \frac{A_2}{a} \left[\left(1 - \frac{3}{2} \sin^2 i \right) \left\{ \frac{2}{3} \left(\frac{a}{r} \right)^3 + \frac{1}{3} (1 - e^2) \frac{-3}{2} \right\} \right. \\ &\quad \left. + \left(\frac{a}{r} \right)^3 \sin^2 i \cos 2(v + \omega) \right] \\ de &= \frac{1 - e^2}{e} \frac{A_2}{a^2} \left[\frac{1}{3} \left(1 - \frac{3}{2} \sin^2 i \right) \left\{ \left(\frac{a}{r} \right)^3 - (1 - e^2) \frac{-3}{2} \right\} \right. \\ &\quad \left. + \frac{1}{2} \left(\frac{a}{r} \right)^3 \sin^2 i \cos 2(v + \omega) \right] \\ &\quad - \frac{\sin^2 i}{2e} \frac{A_2}{ap} \left\{ \cos 2(v + \omega) + e \cos(v + 2\omega) + \frac{1}{3} e \cos(3v + 2\omega) \right\} \\ d\omega &= \frac{A_2}{p^2} \left[\left(2 - \frac{5}{2} \sin^2 i \right) (v - M + e \sin v) \right. \\ &\quad \left. + \left(1 - \frac{3}{2} \sin^2 i \right) \left\{ \frac{1}{e} \left(1 - \frac{1}{4} e^2 \right) \sin v + \frac{1}{2} \sin 2v + \frac{e}{12} \sin 3v \right\} \right] \\ &\quad - \frac{1}{e} \left\{ \frac{1}{4} \sin^2 i + \left(\frac{1}{2} - \frac{15}{16} \sin^2 i \right) e^2 \right\} \sin(v + 2\omega) \\ &\quad + \frac{e}{16} \sin^2 i \sin(v - 2\omega) - \frac{1}{2} \left(1 - \frac{5}{2} \sin^2 i \right) \sin 2(v + \omega) \end{aligned}$$

General Notice -- This series of Special Reports was instituted under the supervision of Dr. F. L. Whipple, Director of the Astrophysical Observatory of the Smithsonian Institution, shortly after the launching of the first artificial earth satellite on October 4, 1957. Contributions come from the Staff of the Observatory. First issued to fulfill a demand for the rapid dissemination of satellite tracking data, the Reports have continued, to ensure the rapid communication of current satellite data, data analyses, and material relating to progress in the astrophysical and space sciences.

The work reported in this series is supported, in part, through grants from the National Science Foundation and the National Aeronautics and Space Administration, and contracts with the Army Ballistic Missile Agency.

The Reports are produced under the supervision of Mrs. L. B. Davis, and edited by Mrs. L. G. Boyd.

The Reports are regularly distributed to all institutions participating in the U.S. space research program, and are also available, free of charge, to interested scientists. The Reports are indexed by the Science and Technology Division of the Library of Congress. To receive the Reports regularly or to obtain individual copies, please send a request to Administrative Officer, Technical Information, Smithsonian Astrophysical Observatory, Cambridge 38, Massachusetts.
